

EDUCATORS SHAPING OUR SOFTWARE

Every change we incorporate is inspired by what educators want and need and we design our software with one goal in mind - to advance the art of education.

BUILT FOR EDUCATORS BY EDUCATORS

A school in St. Laurent, QC serving special needs students asked Edvance Software to develop custom software that would support the specific and extensive work on IEPs that they had already produced. The first module we built facilitates the sorting and classifying of thousands of measurable objectives that can be assigned to individual students. The second module facilitates the evaluation of the assigned goals.

Edvance's Web-based IEP Management Tools

The Special Needs and Individualized Education Plan module of the Edvance Software System easily processes thousands of objectives and allows teachers and staff to assign them to individual students as needed.

The IEP thus created can then be used to guide daily instruction.

At the end of term, progress reports can be created and distributed to parents without re-entering objectives or evaluations already assigned to the student.

As a teacher, you know that your regular management tools may not be sufficient to evaluate gifted or special needs students. Our easy to use interface provides a comprehensive view of the student's learning profile and eliminates duplicate entry of information - allowing you to focus primarily on your role as mentor.

Features and Benefits

- Facilitates collaboration when building, using and maintaining IEPs
- Helps monitor and evaluate students' progress
- Integrates medical records
- Helps manage job placement/coaching programs
- Supports the management of learning profiles
- Fully online
- Easy to use and intuitive user interface
- Saves time
- Can be customized to meet provincial data reporting requirements
- Free updates
- Unique pricing for smaller schools
- Eliminates data entry redundancies
- Organizes and stores thousands of objectives
- Provides secure data transmissions
